

Tense Outdoor

Designer	Piergiorgio Cazzaniga, Michele Cazzaniga
Year	2019-2020

The outdoor version of the Tense tables collection is the result of in-depth research on the most suitable materials for use in outdoor spaces. Fully covered in aluminium sheet, Tense stands out for its iconic and essential design, enhanced by two finishes that accentuate its visual and tactile appeal.

In the goffered painted finish, available in white, corten, and iron black, the table adopts a modern character, ideal for contemporary contract settings.

Alternatively, the reconstructed stone option, with its strong material presence, is perfect for elegant and refined environments, ranging from villa gardens to parks and the outdoor areas of high level hotels and restaurants. The material finishes are crafted from a blend of natural components which create a rich and dense texture, manually applied on each table to ensure a unique and distinctive result.

Tense's design, combined with these refined finishes, adds exclusivity and value to outdoor spaces, harmoniously interacting with the surrounding nature.

Painted Top/Structure

Extruded aluminium legs, 35x35 cross-section, with stainless steel structural tie-rod and adjustable feet. The load-bearing top, 35 mm thick, is a composite panel made up of an inner frame of galvanised steel profile, painted with a specific treatment for outdoor use, and filled with polystyrene. This is completely covered, both on the top and on the edges by an aluminium sheet. The only black iron finishes have a cloudy shaded effect.

Reconstructed stone Top/Structure

Extruded aluminium legs, 35x35 mm cross-section, with stainless steel structural tie-rod and adjustable feet. The load-bearing top, 35 mm thick, is a composite panel made up of an inner frame of galvanised steel profile. Textured finish obtained from a blend of mineral powders that have been micronised and mixed with liquid acrylic and water-based products, giving it a material essence. The finishes are applied manually with a palette knife over the entire surface of the table, followed by a maturation process at room temperature. The material is subsequently protected with a water-based nanotechnological finish that makes the table sturdy and easy to clean. Top, edges and legs covered with the application of a thickness of about 1.5 mm of material.

Reconstructed stone note: visual irregularities, nuances, a lack of uniformity of both surface and material colour are deemed traits of value and uniqueness.

Accessories

Protective rain cover in light grey colour, specifically for outdoor products, waterproof, made of 100% polyester, outside with acrylic coating, inside with acrylic resin coating. Its characteristics are emphasised by its fully fungicidal Teflon finish.

Each rain cover comes with a closable slip cover, so that it can be folded and kept correctly when not in use.
